

Mohammed Fawzy

Full-Stack Developer | Vue.js | TypeScript | Java | Spring Boot

Beni Suef, Egypt | devfawzey@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Summary

Full-Stack Developer with professional experience building enterprise applications with Vue.js and TypeScript, alongside hands-on backend development in Java, Spring Boot, JPA/Hibernate, REST APIs, and SQL Server. Skilled at designing reusable frontend architecture and complex data-driven interfaces, and at delivering end-to-end business features across large-scale applications with a focus on clean architecture, secure APIs, and maintainable code.

Experience

Namasoft

Giza, Egypt

Frontend Developer (Vue.js) — Full-Stack Development

Jan 2025 – Present

- Develop enterprise ERP functionality using Vue.js, TypeScript, Quasar, and AG Grid across a large multi-module application, focusing on maintainable and reusable interfaces.
- Design and standardize reusable frontend capabilities including data-grid workflows, advanced filtering, bulk editing, dashboards, timelines, onboarding flows, accessibility, and localization.
- Deliver business features across the stack by collaborating on Java/Jakarta EE services, JPA/Hibernate persistence, SQL Server data, and web-service contracts.
- Designed and delivered a complete Technician Appointment and Booking CRM module covering scheduling workflows, validation, localization, frontend integration, and backend services.

Projects

Library Management System

[GitHub](#) | [Live Demo](#)

Java 21, Spring Boot, Spring Security, JWT, JPA/Hibernate, SQL Server, Vue.js, TypeScript, AG Grid, Tailwind CSS

- Built a full-stack library management system covering catalog management, users, authors, categories, borrowing, returns, due dates, and borrowing history.
- Implemented a secure Spring Boot backend with Spring Security, JWT authentication, role-based authorization, BCrypt, DTOs, validation, exception handling, and layered architecture.
- Built a Vue 3 admin interface with TypeScript and AG Grid, including responsive layouts, filtering, search, pagination, reusable components, and data-management workflows.
- Added unit tests for backend business logic using JUnit 5 and Mockito.

GemyClass — E-Learning Platform

[Live](#)

Vue.js, Vite, TypeScript, Pinia, Express, MongoDB, JWT, Google OAuth

- Developed an Arabic RTL e-learning platform for secondary-level Math and Physics, supporting lessons, attendance, grades, payments, groups, and exams.
- Architected the platform as a monorepo with a Vue.js/TypeScript frontend, an Express/MongoDB backend, and shared domain types across the codebase.
- Implemented secure authentication and authorization using JWT, refresh-token cookies, Google OAuth, and backend authorization middleware.
- Deployed the application across Vercel and a VPS using Nginx, with separate services for frontend and backend workloads.

Skills

Frontend: Vue.js, Nuxt.js, TypeScript, JavaScript, Pinia, VueUse, Quasar, Tailwind CSS, SCSS, AG Grid, Vue Router, Responsive UI, Accessibility, i18n

Backend: Java, Spring Boot, Spring Security, Jakarta EE, Node.js, Express, REST APIs, JWT, OAuth 2.0, JPA, Hibernate, DTOs, Validation

Databases & Data Access: SQL Server, MongoDB

Tools & Practices: Git, Maven, JUnit 5, Mockito, Postman, Clean Architecture, Design Patterns, Agile/Scrum

Education

Beni Suef University

Beni Suef, Egypt

Bachelor's Degree in Computer Science

2018 – 2022
